NimbusHome Inc.

Customer Support & Product Warranty Policy Handbook — Version 3.2, Effective August 2026

1. Purpose and Scope

This handbook establishes the official policies governing customer support operations, product warranty claims, return procedures, and escalation pathways for all NimbusHome smart home products sold through authorized retailers and the NimbusHome.com storefront. It applies to all customer-facing staff, including Tier 1 support agents, Tier 2 technical specialists, and field service technicians, as well as to third-party contractors operating under a NimbusHome service agreement.

This document supersedes all prior versions of the support and warranty handbook. Employees should discard printed copies of Version 3.1 and earlier, as pricing thresholds, warranty durations, and escalation timelines referenced in this version have changed materially since the previous release.

2. Standard Warranty Terms

2.1 Coverage Duration

All NimbusHome products carry a limited manufacturer warranty beginning on the date of original purchase, as verified by a dated receipt, order confirmation email, or registration within the NimbusHome app. Coverage duration varies by product category: security devices and locks carry a 2-year warranty, climate control devices carry a 3-year warranty, major appliances such as dryers carry a 5-year warranty, and small kitchen and lighting accessories carry a 1-year warranty unless otherwise specified on the product listing.

Extended warranty plans, sold separately at checkout, add up to 3 additional years of coverage and include one complimentary in-home service visit per covered device. Extended warranty eligibility must be confirmed within 30 days of the original purchase date; plans cannot be added retroactively after this window closes.

2.2 What Is Covered

The standard warranty covers defects in materials and workmanship under normal residential use, including component failures, manufacturing defects, and premature wear of internal parts not attributable to user error. Covered repairs or replacements are provided at no cost to the customer, and NimbusHome will cover standard ground shipping for both the return of the defective unit and delivery of the replacement.

Software and firmware issues that render a device non-functional are also covered under warranty, and in most cases can be resolved remotely by Tier 2 support without requiring a physical unit exchange. Agents should always attempt a remote firmware diagnostic before authorizing a hardware replacement, since a significant portion of reported 'defects' are resolved through a firmware update or factory reset.

2.3 What Is Not Covered

Warranty coverage excludes damage resulting from accidents, misuse, unauthorized modifications, exposure to conditions outside the product's rated specifications (such as installing an indoor-rated device outdoors), pest damage, or cosmetic wear that does not affect functionality. Products purchased through unauthorized third-party resellers, including most marketplace listings not explicitly labeled 'Sold by NimbusHome,' are not eligible for warranty service.

Consumable components, including but not limited to air filters, water filtration cartridges, and coffee grinder burrs, are not covered under warranty beyond the first 90 days, as these parts are expected to be replaced periodically through normal use.

3. Return and Refund Policy

3.1 Standard Return Window

Customers may return any unused, unopened NimbusHome product within 30 days of delivery for a full refund to the original payment method. Opened products in resalable condition, meaning all original packaging, accessories, and documentation are intact, may be returned within the same 30-day window for a refund minus a 15% restocking fee, except where prohibited by local consumer protection law.

Products returned after 30 days but within 60 days of delivery are eligible for store credit only, issued as a NimbusHome gift card equal to the original purchase price minus the restocking fee. No returns, refunds, or credits are issued for products returned more than 60 days after delivery, except in cases where the product is defective and covered under the standard warranty terms described in Section 2.

3.2 Return Shipping and Processing

Customers initiating a return through the NimbusHome app or website receive a prepaid return shipping label at no charge for defective items; for non-defective returns within the standard window, a flat $7.99 return shipping fee is deducted from the refund unless the customer used in-store drop-off at a participating retail partner location.

Refunds are processed within 5 to 7 business days of the returned item passing warehouse inspection. Customers should be informed that refund timelines to their bank or card issuer may add an additional 3 to 5 business days beyond NimbusHome's processing window, and agents should set this expectation proactively to reduce follow-up contact volume.

4. Support Escalation Procedures

4.1 Tier 1 Responsibilities

Tier 1 agents handle initial customer contact across chat, email, and phone channels, and are responsible for basic troubleshooting including app connectivity issues, firmware update guidance, and general product usage questions. Tier 1 agents should consult the knowledge base for documented fixes

before escalating, since a majority of Tier 1 tickets are resolved through existing troubleshooting articles without requiring specialist involvement.

A ticket should be escalated to Tier 2 when the issue involves suspected hardware failure, when a customer requests a warranty replacement, or when a documented troubleshooting article has been fully attempted without resolving the customer's issue. Tier 1 agents must log all troubleshooting steps already attempted before escalating, so Tier 2 specialists do not repeat the same diagnostic steps with the customer.

4.2 Tier 2 and Field Service

Tier 2 specialists handle advanced diagnostics, remote firmware interventions, and the authorization of hardware replacements or repairs under warranty. For products requiring physical inspection, such as major appliances that cannot be easily shipped, Tier 2 may schedule a field service technician visit; field visits should be offered only after remote diagnostics have been exhausted, given the higher cost of in-home service relative to remote or mail-in resolution.

Any case involving potential safety concerns, such as reports of overheating, smoke, or unusual electrical behavior, must be escalated immediately to the Product Safety team regardless of warranty status or ticket tier, and agents must not attempt to troubleshoot such cases through standard channels.

5. Data Privacy in Support Interactions

Support agents accessing customer account data, including device activity logs, camera footage metadata, or lock access history, must do so only as necessary to resolve the reported issue and must never share this data outside of official support channels. Any customer request to access, export, or delete their personal data should be routed to the Privacy Team using the designated internal request form, as agents are not authorized to fulfill these requests directly.

Recorded support calls and chat transcripts are retained for 180 days for quality assurance purposes and are then automatically purged from active systems, though anonymized aggregate data may be retained longer for product improvement analysis.
